

ENVIRONMENTAL POLICY

Objective: TWS Total Water Solutions is able to demonstrate an active, consultative commitment to minimising environmental impact across its business operations.

Environmental Policy

TWS Total Water Solutions has developed and implemented an environmental policy, supplemented by an environmental management system to meet its obligations and legislative requirements. This will also assist to achieve a consistently high standard of environmental performance. Regular review of the EMS at senior level reinforces its importance to TWS Total Water Solutions' commercial objectives and legal obligations.

Policy Incorporates Management Commitment to Comply with Relevant Legislation

TWS Total Water Solutions' Environmental Policy will ensure compliance with legislative requirements and current industrial standards such as:

- Environment Protection and Biodiversity Conservation Act 1999 (EPBC Act)
- Various Codes of Practice
- AS/NZS ISO 14001 ~ Environmental Management Systems
- Environmental Protection Act (1994)

Consultation

TWS Total Water Solutions is committed to consultation and co-operation between management and employees, to any change or input to the EMS (including the Environmental Policy) that will affect the workplace.

Reporting and Recording of Environmental Incidents

TWS Total Water Solutions has a strict procedure for internal and external reporting and recording of work-related incident, injury, or illness. This is also to be utilised for environmental incidents.

Continuous Improvement in Environmental Management

TWS Total Water Solutions environmental process is subject to regular reviews when factors likely to affect the degree of risks or the context such as changes in the organisation, materials, work procedures, work location, processes or methods occur. There are standards related to the type or frequency of monitoring and review activities such as inspections and audits.

As time proceeds new information comes to light in terms of risk and controls; therefore the environmental assessment needs to be repeated regularly. Repeating the assessment process with rigorous acceptability criteria also promotes continual improvement in managing environmental impact.
